

Press Release

Fjordlab is the first laboratory in Norway to receive ISO 17025 accreditation for aggregate analysis

Jelsa, Norway – 28 October 2025

Fjordlab AS, an independent aggregate laboratory located at Mibau Stema Norway's facility in Jelsa, has been officially accredited in accordance with the ISO 17025 standard – and is the first Norwegian laboratory to achieve the highest recognition of quality a laboratory can receive in physical and mechanical aggregate analysis. The accreditation marks an important milestone for both Fjordlab and the wider aggregates and minerals industry in Norway.

Fjordlab is established as a dedicated and independent unit within the Mibau Stema Group, offering high-quality testing and analysis services for customers in the asphalt, concrete, mineral, and aggregate industries, as well as the offshore sector. Equipped with modern technology and staffed by experienced professionals, the laboratory performs a variety of aggregate analyses, including geometric, mechanical, physical, and chemical properties.

"Achieving ISO 17025 accreditation is a great recognition of our team's professionalism and commitment to quality," says Venke H.Dahlberg, Managing Director of Fjordlab AS. "It confirms that our methods, expertise, and quality system meet international standards – and, most importantly, it gives our customers added confidence in the reliability of our analysis results."

ISO 17025 is the international standard for general requirements for testing and calibration laboratories and sets stringent requirements for impartiality, professionalism and consistent operation. With this accreditation, Fjordlab strengthens its position as a trusted partner for both Norwegian and international clients.

Fjordlab continues to expand the extent of analysis methods and remains dedicated to supporting the industry's development through accurate, and quality-assured accredited testing services.
